WORKSHOP #: 35

DAVID GUSTAVO CEPEDA SALGUERO

The screenshot shows the Apache NetBeans IDE interface. The main editor displays the source code of a Java test class named `BasicOperationTest` in the package `ec.edu.espe.operations.controller`. The code includes imports for JUnit 5 and a test method `testAdd()` that verifies the `add()` method of the `BasicOperation` class. The output window at the bottom shows a failed build with the following error messages:

```
Build of Operations (test) failed.
C:\Users\David\AppData\Local\NetBeans\Cache\18\executor-snippets\junit.xml:184: The following error occurred while executing this line:
C:\Users\David\AppData\Local\NetBeans\Cache\18\executor-snippets\junit.xml:128: The <classpath> or <modulepath> for <junit> must include junit.jar if not
BUILD FAILED (total time: 7 seconds)
```

A notification bubble at the bottom right of the IDE states: "No tests executed for project: Operations" with a link to "Open Test Results Window".
